Avast® Business Antivirus

The fastest protection powered by the world's largest threat detection network

THE BIG BENEFITS

Protecting critical business and customer data against the latest threats while you stay focused on your business

Machine-learning protection

Threats are constantly evolving and thanks to Avast's machine learning and the world's largest threat detection network our protection is constantly evolving, detecting new threats quickly and keeping you safe.

Behavior Shield

Protect against the newest threats by closely watching the behavior of all running programs and able to step in and stop a program instantly.

Clean and safe Inbox

Our anti-spam service is constantly running to keep your inbox clean with real-time updates provided through the world's largest sensor network.

SmartScan

Speeds up the scanning process by combining scans for malware, software updates, network problems, new features and performance issues - shows itemized results and offers tools and suggestion to fix them.

PROTECTION

Today's threats are ever-changing. Your protection needs to be both broad in coverage and deep in capability. Only Avast has the advantage of the world's largest threat detection network powered by 400 million endpoints.

ANTIVIRUS

Avast antivirus combines four real-time shields; File Shield, Web Shield, Email Shield and Behavioral Shield to offer comprehensive protection against today's threats.

- **FILE SHIELD**

  Stops threats and keep your business moving. File Shield

quickly scans files that are launched on a PC to ensure they're free of malware.

- **WEB SHIELD**

  Web Shield scans both HTTP and HTTPS sites for malware and other dangers, even verifying website

certificates, without disrupting your browsing experience.

- **EMAIL SHIELD**

  Free your workforce to surf,

powered by AVG and Avast

search and email with confidence. Email Shield scans emails in your inbox to ensure they're free of malware.

- ## BEHAVIOR SHIELD

  Provides real-time monitoring of all programs currently running on your PC. If it notices a behavior out of the ordinary (e.g. a PDF trying to access a web link) it blocks the action and reports the behavior to you.

FIREWALL

Better outbound protection and configurability compared to Windows Firewall. It silently monitors all traffic using crowd sourced data from our 400 million global users to keep you safe.

ANTI-SPAM

Phishing and other threats rely on email as the primary attack method. Anti-spam keeps all the spam and suspicious emails out of your inbox. You can even adjust how tightly Anti-spam controls the flow of emails to your inbox.

SMARTSCAN

SmartScan combines scans for viruses, software updates, network problems, new features and performance issues into a single click.

Once completed, it shows the itemized results and, if there are any issues, offers tools and suggestions to fix them.

SANDBOX

When you're not sure about a given file or application, run it safely in a virtual space isolated from the rest of your PC. Now there's no risk of stolen data or corrupted software. Easily run individual files with just a click, and continue to run them for as long as you see fit. Any changes made by the executable are not saved once the Sandbox is closed.

WIFI INSPECTOR

Scans networks for vulnerable devices and compromising services then allows you to address any security issues reported by providing step-by-step remediation instructions.

REAL SITE

Malware can redirect you away from your intended destination, such as your bank's website, to a fake site that looks just like the real thing.

Real Site stops malware in its tracks by encrypting the traffic between an Avast-protected device and our DNS server.

YOu can relax knowing that you will always go to the right destination, every time.

RESCUE DISC

Helps you create a bootable version of your Avast installation. This way, if your PC becomes so infected that it can't even run properly, you can clean reboot and restore functionality.

CYBERCAPTURE

Avast's proprietary, cloud-based CyberCapture identifies, isolates and determines, even more quickly, whether unknown files are harmful - analyzing results in real-time. CyberCapture isolates unknown files safely in the cloud for a deeper level of analysis and automatically establishes a two-way communication channel with Avast Threat Labs to speed detection.

CyberCapture analyzes over 10,000 new files every day to protect you against the latest threats.

AVAST ONLINE SECURITY

Avast Online Security features a number of browser plug-ins. **Do Not Track** identifies tracking software allowing you to enable, disable or create a selectively private online browsing experience.

Each of our browser plug-ins also include an **Anti-phishing** feature that blocks webpages from loading if Avast detects malicious sites. The **SiteCorrect** function corrects typos in URLs to prevent you from accidentally going to websites you didn't intend to visit.

AVAST BUSINESS ENDPOINT PROTECTION SOLUTIONS

Avast Business provides three tiers of endpoint protection for small and medium-sized businesses.

Avast Business Antivirus is a full-featured antivirus solution.

Avast Business Antivirus Pro includes all the capabilities of the Antivirus solution plus additional data protection capabilities.

Avast Business Antivirus Pro Plus includes all the capabilities of the Antivirus solution plus additional data protection and identity protection capabilities.

All three solutions may be used standalone or centrally managed by either an on-premise or cloud-based management console. Both consoles offer ease of deployment, management and reporting.

ABOUT AVAST BUSINESS

The Avast Business Endpoint Protection solutions secure, simplify and optimize the IT experience for small and medium-sized businesses worldwide. As a business unit of Avast Software, channel partners and their end customers gain the confidence of working with a company that is uniquely positioned in the security and managed services market.

Serving over 400 million people and businesses, each device Avast protects and secures acts as a sensor, providing unparalleled insight into what is happening real-time in our users' world through their connected technologies. Our threat detection network is among the most advanced in the world, using machine learning and artificial intelligence technologies to detect and stop threats in real time. This gives us unprecedented insight into the lifecycle of cyber security attacks, malware, phishing, ransomware and data breaches to deliver the

most comprehensive protection against cybercrime to date while delivering products that are easy to purchase, onboard and implement with high-performance.

Avast Business Endpoint Protection solutions may be managed from the cloud or from an on-premise solution and includes a security remote monitoring and management platform which helps SMBs secure their network.

Avast Business is dedicated to the channel and has a comprehensive partner program in place to support partners with tools and knowledge to successfully position and sell Avast Business products, effectively secure SMBs, and enable profitable channel growth. Partners can access cloud and hosted services for their end customers. On-premise business security solutions can also be purchased online directly by SMBs.

SYSTEM REQUIREMENTS

MINIMUM:

Memory: 256 MB of RAM | Processor: Intel Pentium 4 / AMD Athlon 64 | Free hard disk space (for installation): 2Gb

RECOMMENDED:

Minimum screen resolution: Not less than 800x600 pixels
