Symantec Endpoint Suite
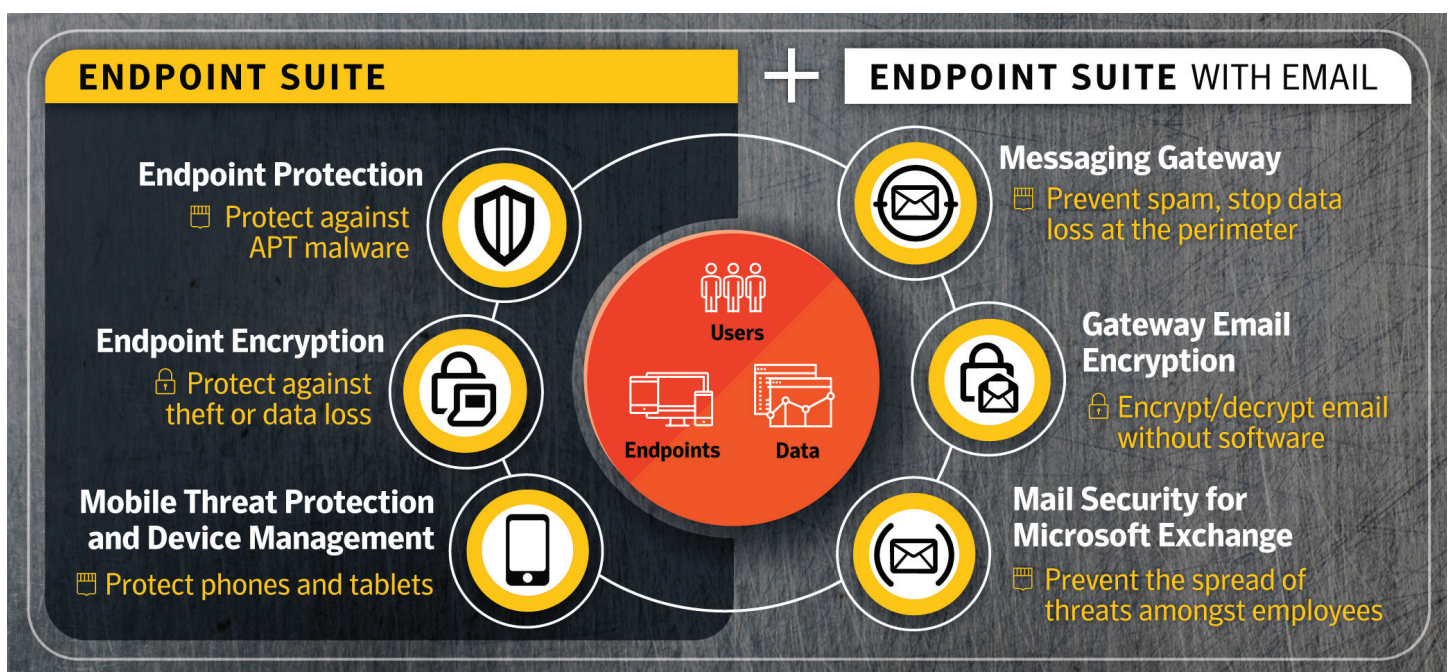

Complete endpoint protection and encryption complimented by mobile and mail security

Overview—Protect your confidential data, mobile devices, and employees

Safeguarding your organization's business-critical assets in today's ever-changing threat landscape has never been more difficult. The threat environment is evolving quickly, and given the size and complexity of today's networks, organizations are struggling to keep up. Last year, we saw 317 million new malware variants, while targeted attacks and zero-day threats were at an all-time high[1]. Email continues to be the number one attack vector for criminals, making email security and email encryption necessary to prevent data loss and the costs related to a data breach.

For today's mobile workforce, laptops and mobile devices provide the freedom of being able to work from anywhere. Increasingly, employees are logging in to corporate networks from hotel rooms, coffee shops and airports. With this freedom comes a much greater risk of these devices, and sensitive data, being lost or stolen. To enable more employee productivity and BYOD (bring your own device), IT teams need to connect employees to networked resources, while still securing the network and data. Symantec found that 17 percent of all Android apps (nearly one million total) were actually malware in disguise[2]. For security administrators and executives, this means a greater risk of a costly data breach.

Complete protection—endpoint, encryption, mobile, and mail security

To effectively address advanced threats, data loss, and email threats (including spam), Symantec™ Endpoint Suite protects against malware threats and data loss with endpoint security, endpoint encryption, mobile threat protection, and device management. Symantec™ Endpoint Suite with Email adds email security and encryption to secure email servers and gateways

from malware and spam while encrypting email to prevent data loss. With two Endpoint Suite versions to choose from, Symantec™ Endpoint Suites allow you to standardize on security solutions from one trusted vendor and receive attractive subscription pricing from the world leader in security and data protection. Symantec™ Endpoint Suites remove complexity and make it easy to purchase best-of-breed, award-winning products to provide layers of protection for your endpoints, mobile devices, and email infrastructure.

Proven proactive protection technologies like Symantec™ Insight and SONAR analyze the reputation and characteristics of suspicious files to determine if they pose a danger to your systems and proprietary information. Symantec™ Disarm, a Symantec proprietary technology, helps protect against targeted attacks and zero-day malware by removing exploitable content from Microsoft Office and PDF attachments—all these technologies are powered by one of the world's largest civilian threat intelligence networks. Symantec meets the broad spectrum of core security needs across your endpoint, mobile devices, and email infrastructure.

Benefits of Symantec Endpoint Suites

Symantec™ Endpoint Suite offers complete protection for laptops, desktops, and mobile devices against malware

Symantec™ Endpoint Suite removes complexity by combining endpoint protection, endpoint encryption, mobile device management and mobile threat protection with predictable subscription pricing.

- Symantec Endpoint Protection provides the security you need (to protect desktops and laptops) through a single, high-powered agent, for the fastest, most-effective protection available.[3] It's more than antivirus; Endpoint Protection stops targeted attacks and advanced persistent threats that cannot be stopped by antivirus alone. Intrusion prevention system (IPS) lockdown, application and device control provide an added layer of security for mobile workers.

- Symantec Endpoint Encryption, powered by PGP, protects data (on your desktops/laptops) with strong full-disk and removable media encryption and features compliance-based, out-of-the-box reporting, plus customizable reports.

- Symantec Mobile threat protection and device management provides trusted security for mobile devices and protects data from data leakage, malware, and unauthorized access so you can securely embrace BYOD (bring your own device) with your employees.

Symantec™ Endpoint Suite with Email secures email from threats at the gateway and email server while email encryption prevents data loss

Symantec™ Endpoint Suite with Email includes the products in the Symantec™ Endpoint Suite (Endpoint Protection, Endpoint Encryption, and Mobile security) and adds:

- Symantec Messaging Gateway defends your email and productivity infrastructure at the perimeter with accurate, real-time antispam and antimalware protection. Advanced content filtering and data loss prevention technologies block sensitive information from leaving your network.

- Symantec Email Encryption Gateway, powered by PGP, encrypts messages to safeguard the confidentiality of sensitive data you exchange with customers and business partners via email, regardless of whether or not recipients have their own email encryption software.

- Symantec Mail Security for Microsoft Exchange complements endpoint protection by preventing the spread of email-borne threats and enforcing data loss prevention policies. It leverages Symantec Premium Antispam to stop 99 percent of spam with less than one in 1 million false positives.

Endpoint Suites are a single solution to drive down costs and maximize IT budgets

- See measurable savings from simplified subscription-based pricing, change from OPEX to CAPEX budgeting, and take the mystery out of license, support, and renewal costs. You can maximize IT budgets to provide more security coverage for less money.
- Remove complexity and consolidate patchwork, multi-vendor solutions to achieve compliance and protect confidential data by layering endpoint, encryption, mobile, and email technologies from one trusted vendor, Symantec.
- Single purchase, single SKU, single support for troubleshooting reduces up-front and on-going costs of managing numerous technologies and vendors while standardizing on market leading products from Symantec, which are backed by one of the world's largest civilian threat intelligence networks.

Endpoint Suites Component Products and System Requirements

Symantec™ Endpoint Suite includes:

- Symantec Endpoint Protection
- Symantec Endpoint Encryption
- Symantec Mobile Device Management
- Symantec Mobile Threat Protection

Symantec™ Endpoint Suite with Email includes:

- Symantec Endpoint Protection
- Symantec Endpoint Encryption
- Symantec Mobile Device Management
- Symantec Mobile Threat Protection
- Symantec Messaging Gateway
- Symantec Gateway Email Encryption
- Symantec Mail Security for Microsoft Exchange
