VIPRE ENDPOINT SECURITY

Server

HIGHEST-RATED PROTECTION

Build a layered defense against today's most prevalent malware threats with VIPRE. Secure your endpoints, email servers, virtual environments and mobile devices from emerging threats like viruses, Trojans, rootkits, exploits, spyware, malicious websites, phishing attacks and more.

VIPRE Endpoint Security protects at the file, application and network layer, combining multiple layers of security with network- and application-agnostic DNS protection at no additional charge.

Advanced Malware Defense

Powered by next-generation advanced machine learning, one of the world's largest threat intelligence clouds, and real-time behavior analysis, VIPRE Endpoint Security protects against ransomware, zero-day attacks, phishing, exploit kits, mobile threats and other malware that easily evade traditional signature-based antivirus. VIPRE Endpoint Security provides:

ENDPOINT SECURITY PROVIDES THE FIRST LAYER OF PROTECTION

VIPRE Makes Security Simple

Clear, easy-to-understand policies and configuration settings for a seamless, labor-efficient security solution.

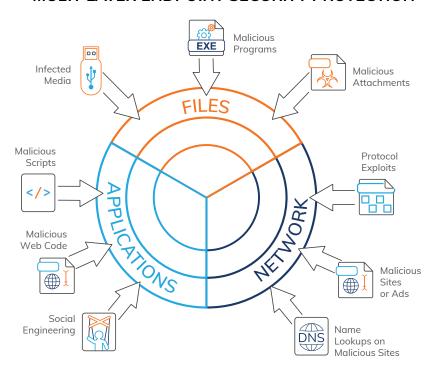

Industry Leader

VIPRE wins Top-Rated Security Product and consistently wins 100% block rates and zero false positives from AV-Comparatives.

- Advanced Ransomware Prevention VIPRE's
 Advanced Active Protection uses real-time behavior monitoring, Al and one of the world's largest threat intelligence clouds help prevent ransomware.
- Integrated Patch Management Ensure installed third party applications are up to date and secure against exploit kits delivering ransomware and datastealing payloads.
- Intelligent Anti-Phishing and Email Security Defend one of ransomware's top threat vectors by keeping employee inboxes safe from malicious attachments and phishing links.
- Removable Device Control and Encryption Limit the risk presented by introducing infected devices to the network and keep your data out of the wrong hands with encryption.

- Cloud-Based Roaming Services Secure and centrally manage remote PCs that leave the network via a cloud-based service using secure HTTPS protocols.
- Malicious URL Blocking Block users from visiting malicious websites or links serving malware and accidentally infecting their PCs and the network.
- Unprotected Computer Identification Alerts are sent when any machines accessing the network without antivirus protection, helping to stop infections before they spread.

MULTI-LAYER ENDPOINT SECURITY PROTECTION

| FILE LAYER | |
|---------------------------|---|
| Managed Scans | Automatic and easy manual deep scanning for malicious files, with granular administrative control and delegation |
| Active File Protection | Interactive protection of every file touched on the system |
| Signature-based Detection | Definition database containing millions of known malware signatures updated several times a day |
| Emulation | Unwinds and interprets malware code in a virtual environment to quickly detect threats and catch advanced malware |
| Exclusions | Easily whitelist files and business applications |

| APPLICATION LAYER | |
|---|--|
| Host Intrusion Prevention System (HIPS) | Rule-based system that prevents malicious processes from executing malicious activity |
| Active Process Protection | Leverages machine learning to interactively analyze process behavior and detect potentially malicious activity |

| NETWORK LAYER | |
|----------------------------------|---|
| Intrusion Detection System (IDS) | Looks for suspicious data in the IP frame portion of the packet leveraging more than 8,000 rules, as well as within the application data itself |
| DNS Protection | Prevent users from accidentally visiting malicious sites by intercepting DNS queries for those known-malicious domains and replacing the normal IP address response with a redirect to our DNS sinkhole |
| Malicious URL Blocking | Prevents access to specific URLs by checking against a global threat intelligence network kept up-to-the-minute with the latest list of known-bad URLs |
| Web Exploit Prevention | Looks for suspicious data in the IP frame portion of the packet leveraging more than 8,000 rules, as well as within the application data itself |
| Browser Extensions | Protects encrypted web content by performing analysis within the browser itself, via browser extensions for Firefox and Chrome |
| Exclusions | Easily whitelist files and business applications |

Independently Tested and Validated Security

VIPRE submits to rigorous industry testing providing complete transparency to the marketplace. VIPRE consistently earns 100% block rates with zero false positives as rated by AV-Comparatives, the most widely-trusted independent testing agency. Similarly, AV-Test and Virus Bulletin cite VIPRE as a top-tier endpoint security solution.

Why VIPRE

- The Best Protection at the Best Price VIPRE consistently outperforms big name security vendors in the industry's most comprehensive independent testing.
- Easiest to Use VIPRE's intuitive management console and preconfigured settings makes it easy to secure your networks from ransomware and other threats.
- Fastest to Deploy Admins can deploy VIPRE in less than 10 minutes and have the option of automatically removing any old antivirus agents.
- Small Footprint VIPRE proves speed and security do go together by protecting you from malware without slowing down your PCs.
- Free Support VIPRE always has the customer's back with free, highly-rated, award-winning tech support.
